

What is claimed is:

- [Claim 1]** A concrete form pulling tool for prying a concrete form from a concrete structure, comprising:
- an elongated handle having a first and a second end; and
 - a form engagement member affixed to said handle and extending transversely therefrom; and
 - said form engagement member having a hooked end that is adapted to engage said form so that said handle is initially positioned parallel to said concrete structure from which said form is to be pulled from and so that when said handle is pulled upon in a direction normal to said concrete structure said form is pulled therefrom.
- [Claim 2]** The form pulling tool of claim 1, wherein said form engagement member is affixed to said handle approximate said second end.
- [Claim 3]** The form pulling tool of claim 2, wherein said handle is of a length sufficient for a person to pull upon said first end and create a large enough moment force to pull said form from said structure.
- [Claim 4]** The form pulling tool of claim 2, wherein said handle is straight.
- [Claim 5]** The form pulling tool of claim 1, wherein said handle and said form engagement member is free of contact with said structure before and during removal of said form therefrom.

- [Claim 6] The form pulling tool of claim 1, wherein said hooked end is tapered.
- [Claim 7] A concrete form removing tool for pulling free a concrete form from a concrete structure, comprising:
- a tool handle having a first and a second end;
 - a form engagement member affixed to said handle approximate said second end and extending transversely therefrom;
 - said form engagement member having a hooked end that is adapted for engagement with said form so that said handle is initially positioned parallel to said concrete structure from which said form is to be pulled from and so that when said handle is pulled upon in a direction normal to said concrete structure said form is pulled therefrom; and
 - wherein said handle and said form engagement member is free from contact with said concrete structure during operation of said tool.
- [Claim 8] The concrete form removing tool of claim 7, wherein said handle is substantially straight.
- [Claim 9] The concrete form removing tool of claim 8, wherein said handle is of a length sufficient for a person to pull upon said first end and create a large enough moment force to pull said form from said structure.
- [Claim 10] The concrete form removing tool of claim 9, wherein said hooked end is tapered.
